Product Administration Module (BPAM): ED Provider Workflow

Enter the correct blood product order set for the Blood Product Administration Module.

<p>1. Search for the correct order set.</p>	
<p>a. Click the Orders Activity tab.</p> <p>b. Type BPAM in the Place new order or order sets field and press Enter.</p>	
<p>c. Select and open the appropriate BPAM order set.</p> <ul style="list-style-type: none"> ▶ (mL) Less than 20-30 kg Body Weight ▶ (Units) Greater than 20-30 kg Body Weight 	
<p> Tip</p> <p>It is highly recommended to make these order sets as favorites by right-clicking on the order set then select Add to Favorites.</p>	
<p>2. Select the necessary orders (pre-transfusion labs, meds, etc.).</p> <p>3. Select the desired blood product panel.</p> <p>Blood product order with required items opens by default.</p>	

Note

1. Complete blood product order accordingly.
 - ◆ **Priority:** Default is set to **ROUTINE**; change to **STAT** as needed
 - ◆ **Prepare:** Identifies the number of units
 - ◆ **Reason for Transfusion:** select appropriate reason
 - ◆ **Special needs row:** Defaults to **No special needs**. Click the magnify button to select another option, if needed
 - ◆ **Transfusion Duration:** Identifies duration of transfusion per unit of product
2. Entries in the blood product order automatically populate corresponding items in the Transfusion order.
