

EXTUBATION CHECKLIST

Interface choice:

- Fisher/Paykal Flexitrunk interface
 - prong / mask
 - bonnet / Turtle cap

even if extubating to Non-Invasive NAVA, Fisher & Paykel interface should still be used, with the goal of weaning to bubble CPAP as soon as the infant is ready

Non-invasive mode selection:

- bubble CPAP, pressure level: _____
- non-invasive NAVA (e.g., high MAP, high NAVA level, etc.)
 - Edi catheter inserted and depth verified on Servo vent screen
 - NAVA and backup settings entered in the Servo machine
- starting pressure and FiO₂

Resuscitation equipment:

- T-piece set to 20/5 cmH₂O
- ET tube 2.5 and 3.0; stylet
- Laryngoscope size 0 and 00
- Suction catheter 8 and 10 Fr

Medication:

- racemic epinephrine
- caffeine
